

Hello!

You have purchased a digital file that is intended to be used for you to make this 4" dust hose bracket on your CNC machine or 3d printer.

We designed and machined these hose brackets to use with our dust collector for our CNC machine. They are made for Rockler 4" dust hose but could be used for just about any hose or pipe. The inner diameter is 4.45". You can scale up or down as needed.

Overview:

- 5 7/16" wide x 7 1/4" high x 1/2" thick
- Machined from a single piece of 1/2" MDF
- Designed in V-Crave Pro
- All toolpaths are cut using a 1/4" end mill
- We did not use tabs to hold the parts as they were machined as we have a vacuum hold down table.

Thanks for your purchase!

Nate Rat
